

RETHINKING CYBERSECURITY

Every organisation should be able to have effective cyber security. Discover why JUMPSEC's tailored approach to cyber security fosters sustainable and continuous transformation.

Designing innovative approaches to overcome the limitations of generic products and services

- **Tailored Solutions:** Unlike generic product vendors, we refuse to offer off-the-shelf and one-size-fits-all solutions. Our approach ensures we focus on the outcomes you need without wasting time on the superfluous, leading to better value for money, incremental improvement and genuine resilience.
- **Continuous Improvement:** By gaining a thorough understanding of your organisation we can anticipate and communicate the impact of emerging threats, ensuring sustainable cyber security for the future.
- **Pragmatic Mindset:** Absolute immunity is unrealistic. JUMPSEC believes a pragmatic approach is necessary, we help organisations find the balance between security and convenience, so well understood risks are monitored and minimised without affecting business operations.

The Power of a Human-Driven Approach

- **Contextual Intelligence:** JUMPSEC offers something automated attack simulation tools can't: Just like a human adversary, we understand your organisation's unique characteristics and identify attack paths that automated tools would miss.
- **Human-Centric:** Our human-driven, technology-enhanced services complement traditional security methods, offering enhanced agility, creativity and communication of findings to a technical and non-technical audience.
- **Deep Attacker Insight:** Our offensive and defensive expertise is combined to anticipate attacker tactics and build effective defences through preventative and detection-based solutions.

MANAGED DETECTION AND RESPONSE

CONTINUOUS ATTACK SURFACE MANAGEMENT

PENETRATION TESTING

ADVERSARIAL SIMULATION

- EDR efficacy review
- Purple Teaming
- Red Teaming

INCIDENT RESPONSE

- Incident response playbooks
- Incident response readiness

ATTACK PATH MAPPING

ATTACK SURFACE MANAGEMENT

Your organisation is unique, find out how JUMPSEC cyber security capabilities creates unique future proofed cyber defences for your organisation.
